ABSTRACT:

PROBLEM TO BE SOLVED: To provide a display method and display device for an HTML (hypertext markup language) document which skips a specific anchor point at the time of the move instruction of a focus to an anchor point in an HTML document. SOLUTION: A character string 'KEYSKIP' that is preliminarily defined in the start tag is added to specific anchor points which are included in an HTML document. A browser that interprets and displays the HTML document, for instance, successively moves a focus to the anchor points in accordance with the operation of a move key. In such cases, as for an anchor point to which an attribute that skips a focus, the browser skips it without focusing it. About an anchor point to which 'KEYSKIP' is added, it is selectable with a different operating means.
